

Usability Test

Scenario :

You are a student adjusting to online classes, you are constantly missing assignments, class lectures, and feel overwhelmed trying to adjust. You would like to be notified when there is an assignment due and be able to access your classes easier as some are on different platforms and it is hard to keep track.

Task 1: Create an account on the online class scheduler

Task 2: Input your classes and add them to your app, add the two classes you are enrolled in

(1) "CSCE 520 Recorded lecture on Tuesday/Thursdays at 2:10pm"

(2) "CSCE 311 Zoom Fridays at 12:00"

Task 3: Browse the dashboard and view your two classes you added in the calendar

Task 4: Click on a specific class, (CSCE 520), and add any upcoming assignments you would like to be notified about "Add Assignment 3 Due 6/12"

Notes

What changes you should make to your application:

- A back button after the add classes if they want to add another class or edit an existing class
- An edit assignment button to edit current assignments/ a completion check mark for when they complete the assignment and will not be notified
- A receive notifications button where a user can choose which classes to be notified about

What you need to keep the same for your application:

- The option to select how many classes you are enrolled in, this way user can input the exact classes they are enrolled in (in this case the user is only enrolled in 2)
- The ability to click on a class in the dashboard to view class notes, attached links(usually zoom or whichever platform the class uses for lectures), and add assignments
- The ability to change your password if you forgot your password so that users can still access their account
